Summary

After my internship, I helped the .Net team of Tobania.Development introduce testing into their agile development lifecycle. This started with manual test creation, execution and reporting using Jira. To further develop the testing activities, automated API and end-2-end tests were setup to run on a consistent basis and report on any regression issues.

At the invest tribe of BNP, I worked on the setup of the API tests for the newly developed API's on top of the mainframe applications.

As of now, I am on a project at Belfius as part of a team testing the new insurance management application currently being developed.

Experience

Software testing consultant – Tobania, 02/2018 to …
Internship test automation

- End-2-end test automation with Protractor
- Performance testing with JMeter, Blazemeter & Azure

Tobania.Development

- Febelfin Academy: Manual & performance testing
- Ergo: Manual test creation/execution
- TUI: Manual test creation/execution, API test automation & end-2-end test automation
- Piette & Partners: End-2-end test automation
- INI: End-2-end test automation
- *Tools/skills:* Jira, Agile Scrum, Azure DevOps, Cypress, Protractor, Selenium (Java), Postman, JMeter, Mockaroo, SQL, Typescript

BNP Paribas Fortis – Invest tribe

- API testing new API's between the existing Mainframe application and the new frontend application.
- *Tools/skills:* Postman, Agile Center, Agile Scrum
